

Understanding Carbon Footprint Reporting

Understanding Organisational Carbon Footprint is an introduction course that trains participants on how to understand their organisation's direct and indirect greenhouse gas emissions and what steps they will need to take to measure, report and reduce them. The training covers the current national landscape and the urgency of transitioning to low practices. Participants will learn the terminology, basic maths of carbon emissions and the difference between boundaries and Scope 1, 2 and 3 emissions.

By the end of the course, participants will:

- Learn of the physical and strategic risks climate change poses to businesses and the urgency of transitioning to low carbon practices.
- Learn about the standards in GHG Reporting
- Learn about carbon reporting programs
- Understand the terminology and basic maths of greenhouse gas emissions.
- Understand the difference between Scope 1, 2 and 3 emissions and what emissions companies are responsible for.
- Learn how to set appropriate and realistic boundaries for carbon accounting.
- Learn to put a decarbonisation strategy in place.
- Understand the next steps and practical tools needed to measure, report and reduce emissions.

Who should attend:

Anyone who require an understanding of organisational carbon footprint, Senior Management, Heads of Sustainability and Sustainability Officers, Supply Chain Managers, Logistics Managers, Operations Managers
